PREFACE.

"E" Catalogue, "Architects' Edition," is a section from General Catalogue "E," and contains all specialties and such staple goods as may be required in writing specifications. The Figure Numbers are the same as those in the General Catalogue, therefore designating numbers used in specifications from this Catalogue can be found also in the General Catalogue "E."

General Catalogue "E" has been distributed to the Plumbing Trade throughout the United States and Canada.

The illustrative engravings are as nearly like our fixtures, in general outline and design as possible, and, where found necessary, sectional and detail drawings are added. We have endeavored to make the descriptions, as to quality and condition, complete and explicit, and the price lists plain and easily understood. The wood engravings are made by us after our own drawings, involving great expense and much labor; we have, therefore, copyrighted this Catalogue, and will fully protect our rights.

NOTICE. Customers will please not ask us for Electrotypes of Cuts in this Catalogue. The Cuts are intended only for our own use and benefit in seeking trade. They are our advertising matter, and as such we desire to reserve them for our exclusive use.

When specifying, be particular to give Catalogue name and plate number of article wanted.

Hereafter all our specialties will be stamped or labeled with our Trade Mark—see illustration above.

The above cut represents the Slab with Nosings or End Projections, to finish on wall. When Nosings are made they are measured to extreme ends, and also one inch for the edge.

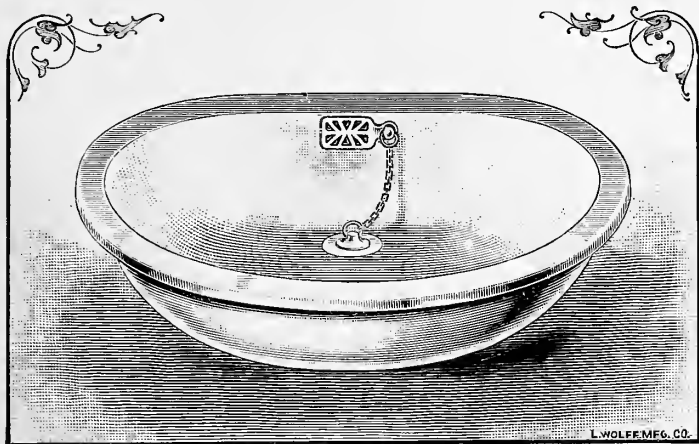

In ordering Recess Slabs great care should be exercised in sending us the exact width and depth of Recess.

The above cut represents Slab to finish flush with the wall.

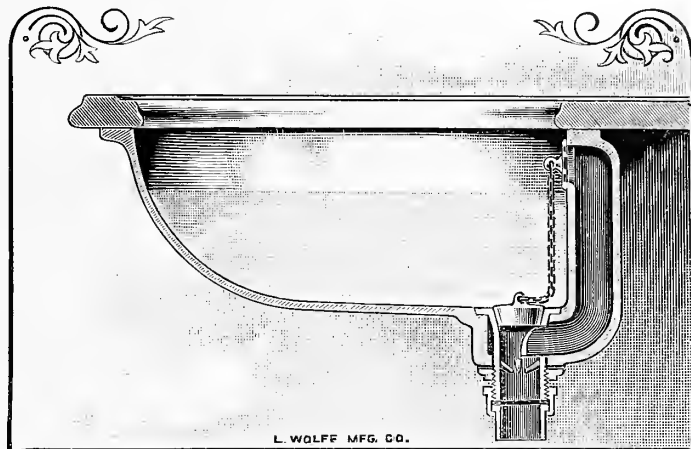

Recess Slabs vary so in size that a table of measurement would be of no benefit to customers.

WOLFF'S "COLUMBIAN" DUROWARE BASIN.

E-1192.—CROSS SECTION OF E-1191.

Price, "Columbian" Basin, "Duroware," each, as shown, - - - - -

14 x 17	14 x 19
\$4.50	\$5.00

Our "Columbian" Basin is a new and original design. In shape it is a combination of the regular oval and straight back basins. It is roomier than either, will keep cleaner and will empty more rapidly than any other basin now in use.

The Overflow, as will be seen by referring to sectional cut, is placed entirely out of the way, has a large, unobstructed waterway, and by swinging Strainer to one side is readily accessible for cleaning purposes.

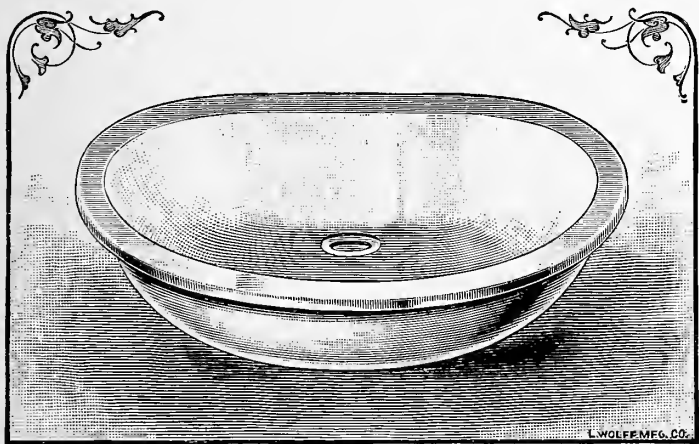

The Brass Waste and Overflow Plug is provided with smooth, round Grate Bars instead of the old style Strainer arrangement. The Bars are so arranged that matter which could cause stoppage in the Trap or Pipes cannot pass. The Bars being round and smooth and pointing downward, horizontal flat surfaces are thus avoided; therefore, this part of the Plug is thoroughly flushed and cleaned each time the Basin is emptied.

Stoppage in the Plug, caused by soapy residue, etc., which in the old style arrangement readily accumulates on the projecting horizontal surfaces, hardens there and eventually closes up the openings in the Strainer, cannot occur in our improved Waste Plugs.

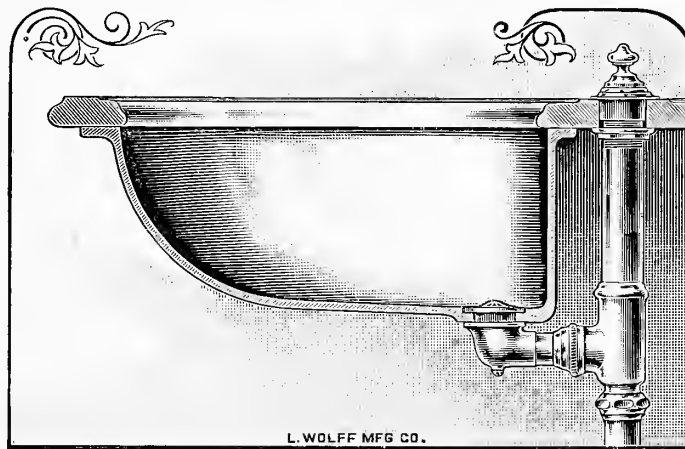

Metal parts are carefully fitted to each Basin. Basins are selected, and ground on top edge, and are made of "Duroware," which is absolutely *non-absorbent* and impervious to all moistures and *positively will not craze*. "Duroware" is fired to such an extreme degree of heat that the glaze and body are partially fused, forming a strong, semi-fused uniform material throughout; therefore, the glaze cannot, like regular ware, craze, crack, or peel off.

Above can be furnished with any of our Lavatories.

WOLFF'S ENAMELED IRON BATHS.

AN extensive plant especially equipped for Enameling purposes, a quality of Enamel unsurpassed, perfect workmanship and thorough experience, enable us to place on the market Enameled Iron Bath Tubs of every size and description, which are fully illustrated in the following 63 pages. We have not confined our product to the old designs on the market for many years, but have introduced mostly

Baths of our own designs, new and original in outline and construction, meeting every requirement of modern ideas. These are termed "Wolff's New Model Baths," and are shown on pages 62 to 125.

When modeling our patterns for the regular shape Baths, changes were made, greatly improving this style in outline, appearance and construction, with a view to improve not only the shape of the tub, but to enable us to fit to them the necessary supply and waste attachments in a far better manner than yet attained.

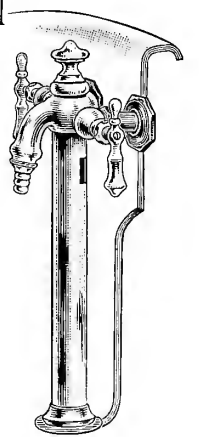

This illustration shows our overflow connection, made of cast brass and furnished with a coupling and tailpiece, enabling plumber to make a permanent and safe connection; impossible with the iron outlet and putty joint.

The waste opening is near the end of the tub, removed as far as possible from interference with bather, therefore standing overflow can be used (see our "Monitor,") when desired, to good advantage.

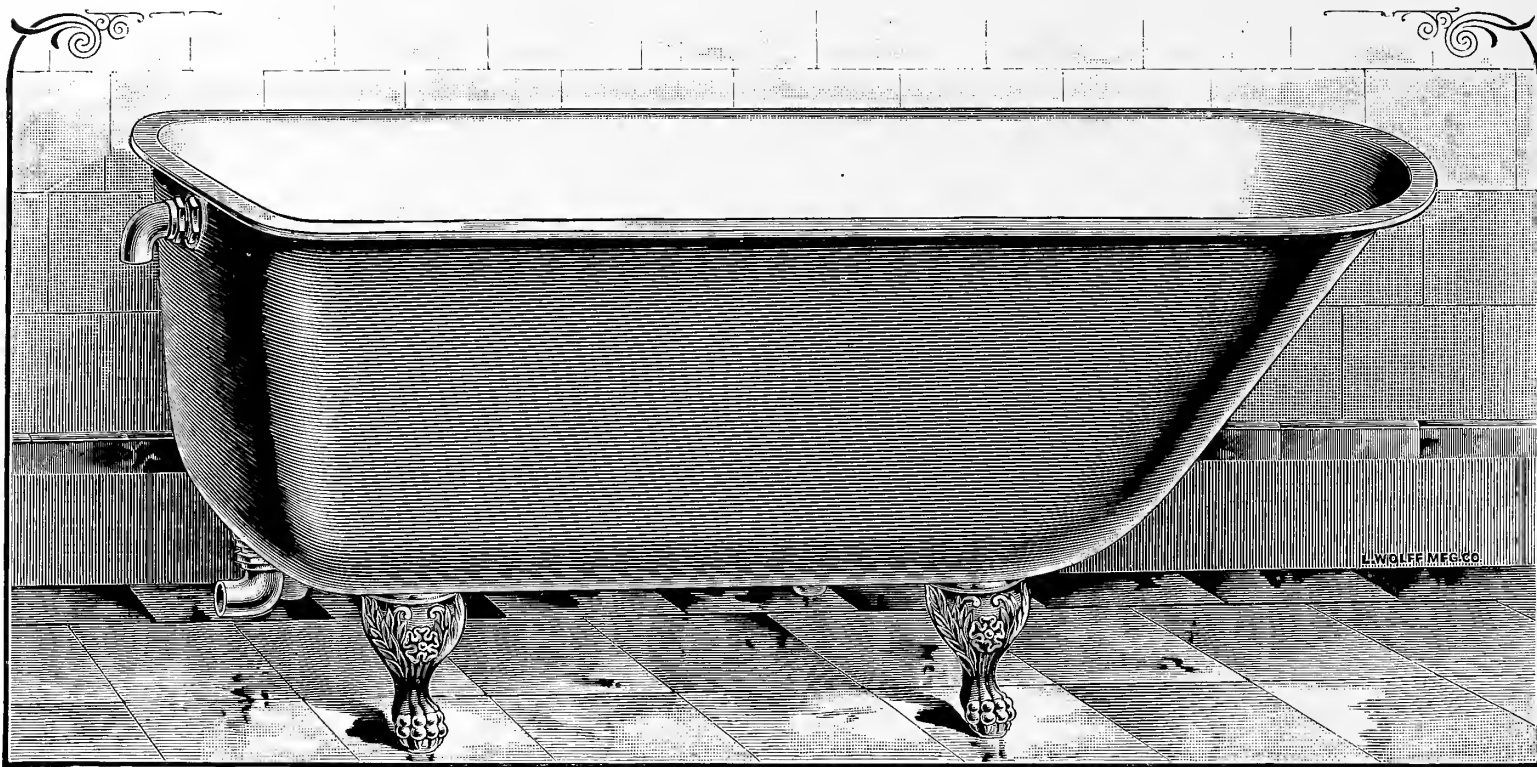

The waste plug is provided with grate bars instead of the old style strainer arrangement; the bars are so arranged that matter which could cause stoppage in the trap or pipe cannot pass; the bars being rounded and smooth and pointing downward, horizontal flat surfaces are avoided.

All brass work furnished is of our own manufacture.

Before shipment is made each tub is carefully inspected and labeled.

"Monitor" Combination Supply, Waste and Overflow, included in E-1337.

Our Improved "Monitor" Combination Supply, Waste and Overflow is a simple and most practical modern sanitary arrangement; being placed very near the end of the Tub it does not interfere with the bather. *The waste opening is two inches clear*, therefore Tub can be quickly emptied, the waste pipes at the same time receiving a thorough flushing. All parts are accessible. By removing cap on tube the inside of same can be reached and kept as clean as its exterior surface. By comparing prices it will be seen that our "Monitor" attachment is hardly more expensive than the ordinary old style overflow, plug and chain arrangement.

"Monitor" Combination Supply, Waste and Overflow, as included in E-1351. (Fuller).

Our Improved "Monitor" Combination Supply, Waste and Overflow is a simple and most practical modern sanitary arrangement; being placed very near the end of the Tub, it does not interfere with the bather. *The waste opening is two inches clear*, therefore Tub can be quickly emptied, the waste pipes at the same time receiving a thorough flushing. All parts are accessible. By removing cap on tube, the inside of same can be reached and kept as clean as its exterior surface. By comparing prices it will be seen that our "Monitor" attachment is hardly more expensive than the ordinary old style overflow, plug and chain arrangement.

SECTION OF MARBLE BASE WITH 2-INCH RAISED EDGE FOR SHOWER BATHS.

Add extra to prices of regular Bases (4 feet by 3 feet 9 inches), \$15.00.

Very often it is absolutely necessary to confine all waste water within the space of the countersunk base; to doubly prevent water from spreading over bathroom floor, a 2-inch high marble frame is fastened to top of base; this, together with the $\frac{1}{2}$ -inch countersinking of base, makes a total of $2\frac{1}{2}$ inches, effectually preventing water from leaving base when Needle Bath is in full operation.

Brass Bell Trap, Cesspools, Strainers, etc., for Bases are shown elsewhere.

WATER CLOSET COMBINATIONS: The "Lupus," "Superior," "Ontario," "Velocitas," "Presto," "Ladoga" and "Uganda," are classed with our *Standard Line Closets*—the *earthenware* being of *extra quality* and careful selection, the *designs are new* and of *superior outline*. The Trap, Flushing Rim, Vent and Flush Connections and the plan of Flush Rim have been in particular *improved*. All Traps are *clean sweep*, the Flushing Rims have Roll-Edge, the Flush Connections are so shortened and constructed that *breakage cannot occur*. The Tanks, Seats and Trimmings are manufactured by us of the *highest grade materials*.

BENT CORNER TANKS.

The front and ends of these are made of one piece of wood, perfectly bent; this *avoids joints* and *square corners* and will also show the grain of the woodwork to better advantage. We believe our *Bent Corner Tanks* make the most elegant and practical Tank casing now in use, and at but a slight difference in cost over the ordinary finish.

"DUROWARE."

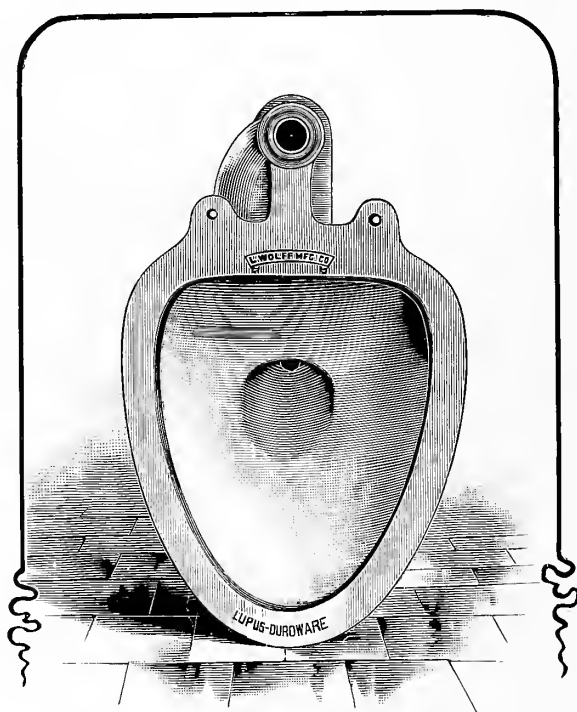

We recommend "Duroware" to those wanting a durable and first-class article. "Duroware" is absolutely non-absorbent and impervious to all moistures and positively will not craze.

In the process of manufacture this ware is fired to such an extreme degree of heat that the glaze and body are partially fused, forming a strong, hard, vitrified substance, which, when broken, shows the same semi-fused uniform material throughout—non-porous. non-absorbent, unlike common ware, which, when broken, shows the porous body ware (biscuit) with a layer of glaze on either side and will readily absorb.

Often the glaze on the common ware crazes, cracks or peels off, which is not possible with our "Duroware," for the glaze of this ware is substantially the same composition as the body, and after firing forms one of its component parts.

When ordering or specifying, please give Catalogue Name and Number and mention "Duroware."

WOLFF'S WATER CLOSETS.

E-1608.

E-1608.

WOLFF'S FROST-PROOF WATER CLOSET,

With Frost-Proof Brass Valve, for outside and exposed places. The Valve is below frost line and is connected with the Hopper by a heavy chain fastened to the Seat. When Seat is depressed the Valve is opened and Hopper is flushed. When Seat is relieved the supply is shut off and the Waste opened, allowing the water which is in pipe between the Valve and Hopper to drain direct into Trap, as shown in illustration; therefore Pipe and Valve are free from water at all times when Closet is not in use.

We furnish a 5-foot length of pipe with Flange for Hopper to rest on and tapped near bottom for the Valve (see illustration) with Trap as shown. Our apparatus is complete, easily connected and of substantial construction. Continued dampness and rotting away of wooden supports is avoided, as all water wastes into sewer.

E-1608 includes Cast-Iron Hopper, Enameled inside, with Oak Self-Raising Seat, Wolff's Frost-Proof Valve, Brass Chain with Adjustable Coupling, Cast-Iron Waste Pipe (4-inch) 5 feet long, with Flange for Hopper and tapped for Valve and Half S Cast-Iron Trap.

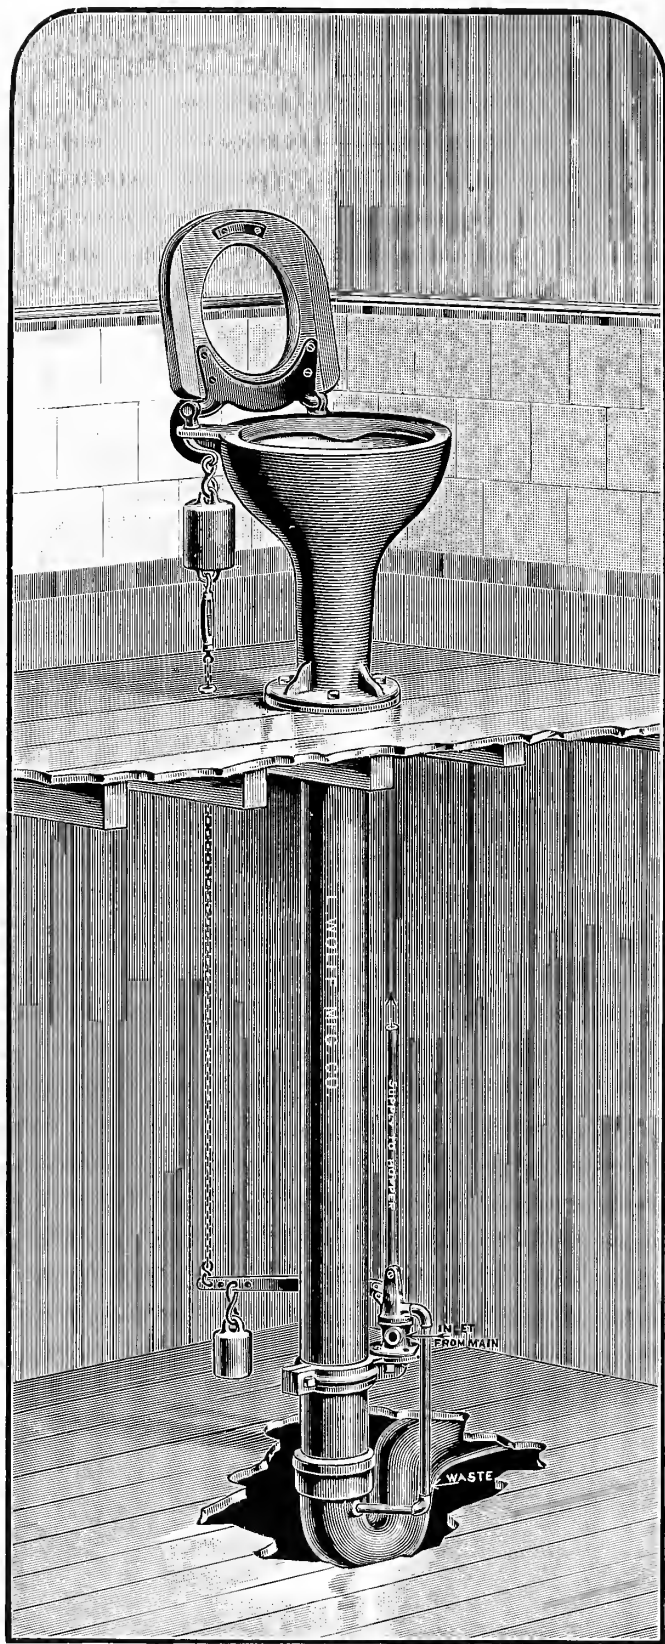

Price, complete as described, - - - - - \$12.00

If Hopper is Enameled outside, add \$1.00.

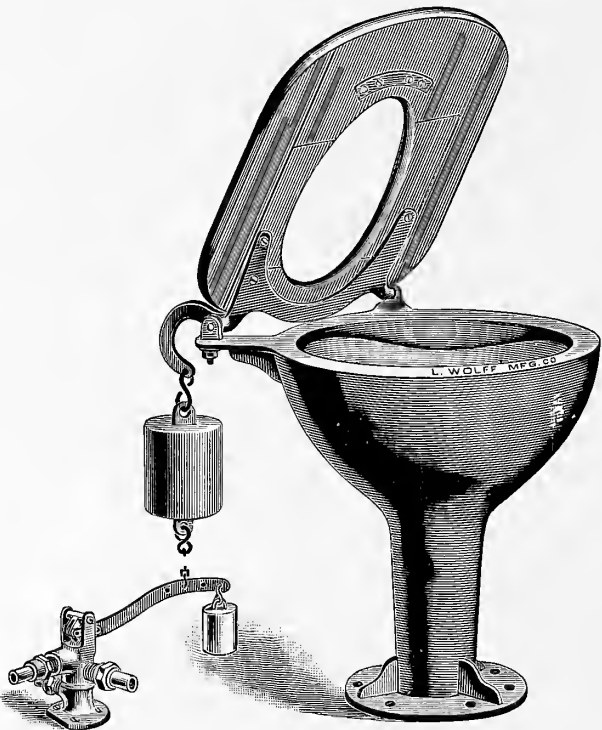

Unless otherwise specified, E-1608 will be sent complete as shown, viz: Hopper, Valve, Pipe and Trap.

The Waste Pipe and Trap can be furnished Enameled inside when desired; price upon application.

E-1612.

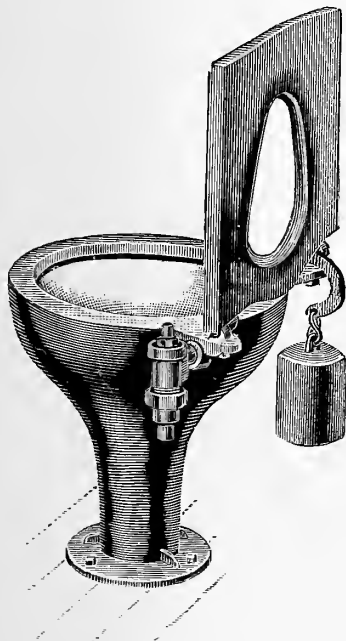

McIVER HOPPER.

WITH KELLY VALVE.

Price, as shown with Kelly Valve, - - - - - \$10.00

The Valve is placed below the frost line and is connected to the Hopper with a chain; when seat is depressed the Valve is opened and Hopper is flushed; when seat is relieved the Supply Valve is closed and the Waste Valve opened, allowing the water which is left between the Valve and Hopper to escape; this leaves the Pipe between the Valve and the Hopper free from water.

This style of Hopper and Valve is especially adapted for use in out-houses or any place where exposed to a low temperature. It has been adopted by the City of Denver for such use.

NOTE.—Above Sinks can be furnished of Slate at same price as "Duro-Stone."

"Duro-Stone" is a fine, close-grained quality of Soapstone from quarries in Virginia, and is remarkable for its *freeness* from *Veins*, *Grit* or *Quartz*. It is therefore very strong and durable. Its composition is such that steam, very hot water, or sudden changes from hot to cold will not affect it.

"Duro-Stone" being non-absorbent, is for sanitary reasons to be highly recommended for Plumbing purposes.

An unlimited supply from a large quarry, favorable freight rates and good machinery enable us to put very low figures on our products made of "Duro-Stone." E-1669 can be made with Shelf and Return Ends.

NOTE.—Sinks made of "Duro-Stone" will be sent on all orders unless otherwise specified.

The Anchor Brand Steel Sink is **made** from **Heavy Stock**, none made being heavier—and have our Patent Brass Outlet Connection, see illustration.

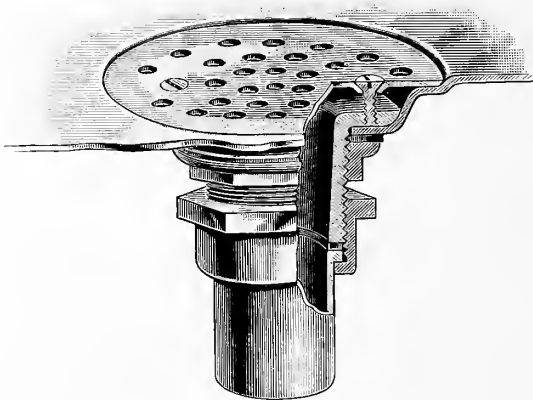

This style of Sink is made of strong Sheet Steel, provided with Brass Outlet Connection for Soldering. It is larger on the bottom by an inch or more in the length and in the width, than other makes, this is quite an advantage and benefit to the user.

The bottom is formed tapering to the center and the outlet, so that drainage is clean and rapid, another advantage not possessed by others.

Doing our own **Enameling** and **Galvanizing**, we can meet the demands of our customers promptly.

OUTLET CONNECTION

FOR ANCHOR BRAND WOLFF'S DRAWN STEEL SINKS.

E-1704.

For Lead or Iron Pipe.

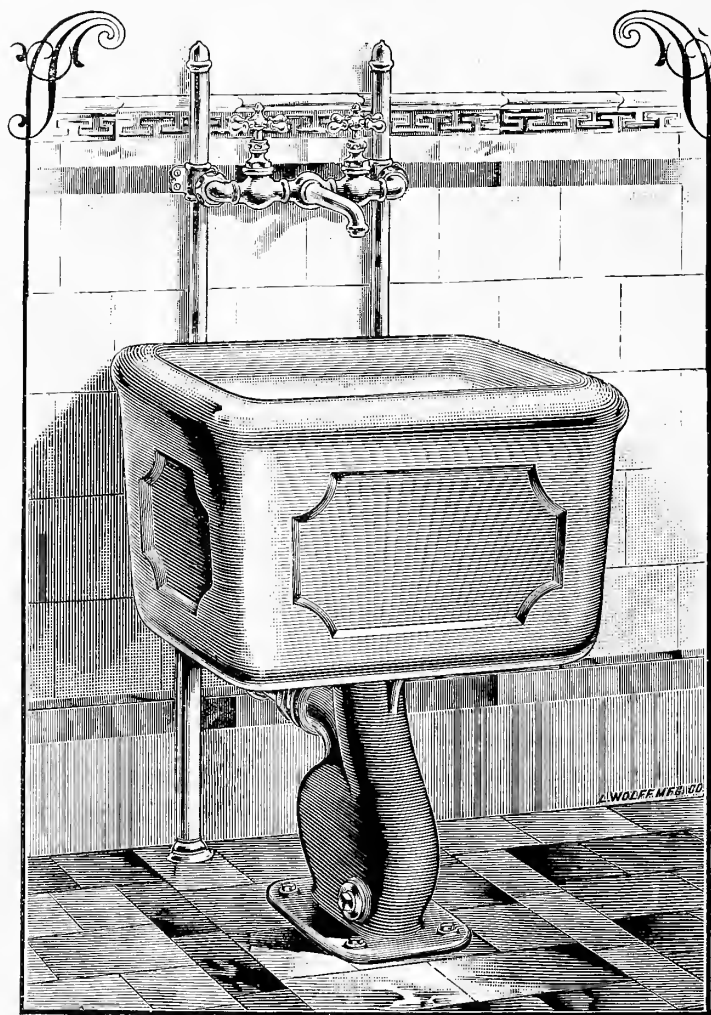

E-1704. As shown the Connection has Tailpiece for Lead Pipe, by removing Coupling and Tailpiece, 1½-inch thread is had for Iron Pipe Connection.

This Connection has the advantage over similar arrangements in having a **clear** and **full sized Waste Way**, without bar or grate obstruction under the Strainer, which can catch lint or gather other substances that will in time obstruct and clog the Water Way.

The **Outlet, having no Bars**, allows the insertion of a Force Pump Hose, for forcing out obstructions in the Waste Pipe, the disconnecting of Waste Pipe is therefore unnecessary, and the danger of damaging Waste Pipe or Trap is entirely obviated.

When specifying give Name and Number of Sink wanted.

Sectional view of Fuller Faucet, as made by the L. Wolff Manufacturing Co.

E-325. Cross section of Fuller Bibb shows manner of construction of Wolff's Fuller Work. Basin, Bath, Pantry and other styles of Fuller Faucets are Constructed on same principle.

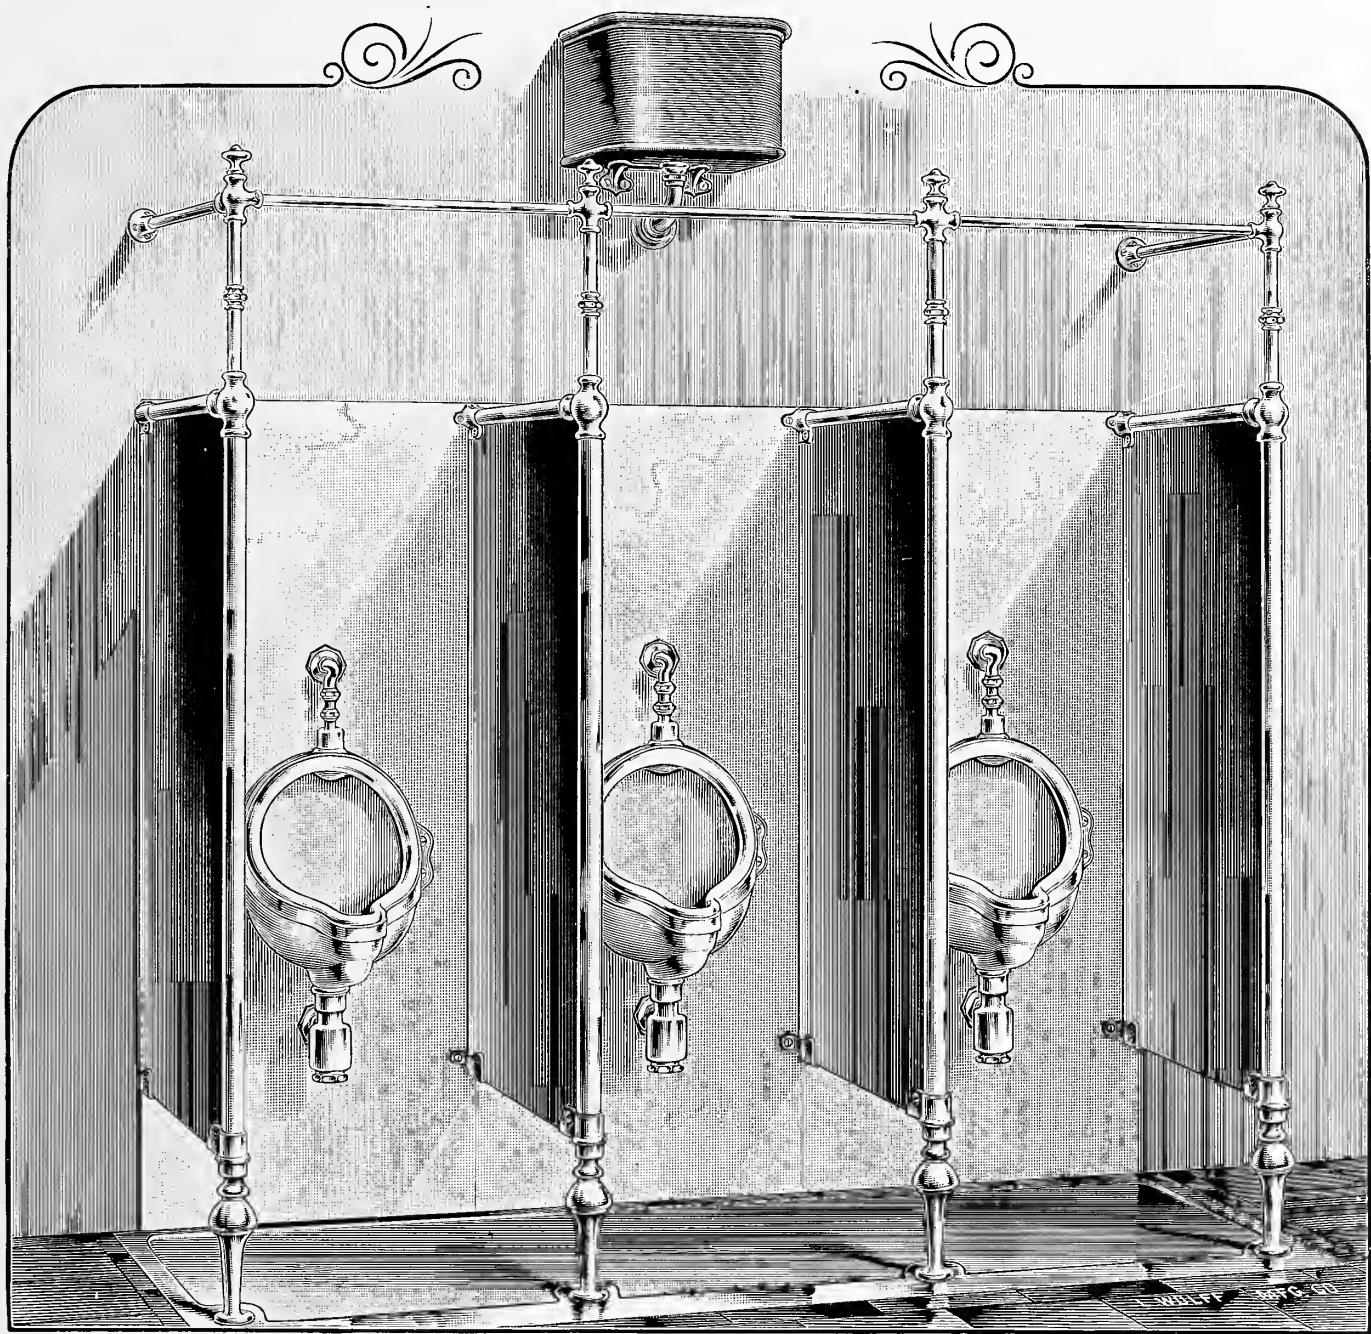

Before being put together each part of these Faucets is subjected to a severe **water-pressure test**, after all parts are fitted and adjusted and the Faucet is completed, it is carefully examined as to **perfection of workmanship, uniformity of metal and finish** of its component parts, and the completed Faucet given a **final water test**.

Each Faucet has lead and wick packing around the stem, preventing leakage.

The construction and adjustment of our Fuller Work insures continued **smooth, easy and firm** working of its parts when opening or closing the Faucet. **Loose stems and rattling** are avoided.

All our Fuller Work **bears our stamp**, and when ordering or specifying, in order to secure our make, mention **Wolff's make Fuller Work**.

We have a very complete and extensive plant for the manufacture of Range Boilers—we think the best equipped one in operation—and make all sizes, from 18 to 192 gallons. See Regular Boiler List for dimensions and prices.

Doing our own galvanizing, making our own rivets and doing the drawing-up work of the heads, all of which is not done by other makers, customers can rely on our boilers being thoroughly well made in all parts.

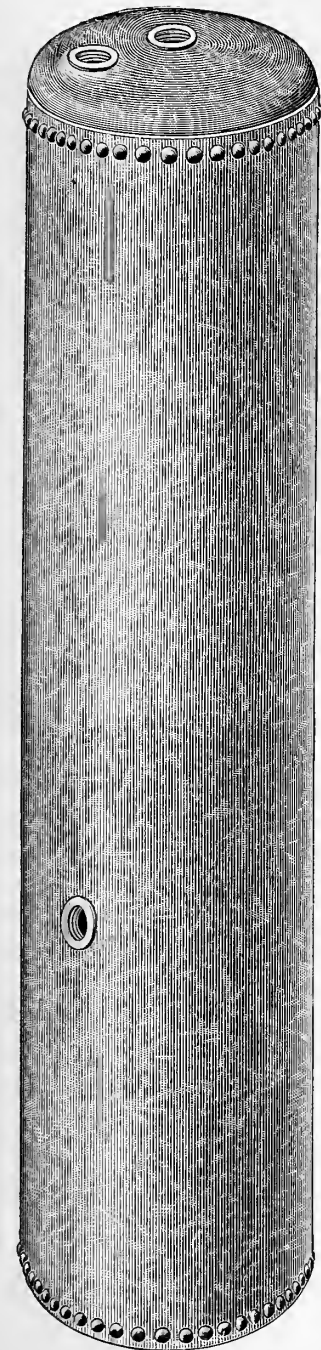

The Brass Couplings for lead pipe, which we furnish with 66 and 82 gallon boilers, have $\frac{3}{4}$ -inch openings so that 1-inch pipe can be run to the water back if desired; these couplings are somewhat larger than the regular kind sold.

All boilers, 82-gallon and smaller, have spuds tapped for 1-inch iron pipe thread.

The 100 and 120 gallon boiler couplings for lead pipe are $\frac{3}{4}$ -inch for the top connections and for 1-inch lead pipe, side and bottom, for circulation to water back; top spuds are tapped for 1-inch iron pipe, and the side and bottom spuds for $1\frac{1}{4}$ -inch iron pipe.

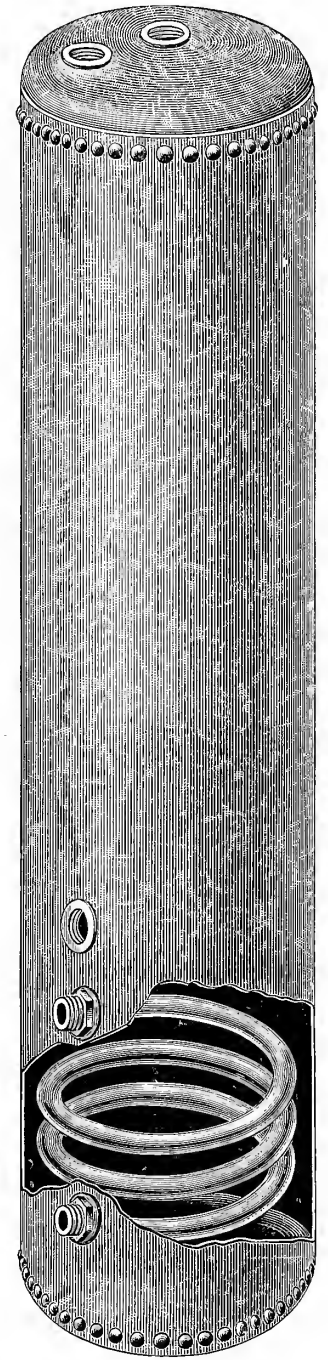

The 144-gallon boilers and larger have $\frac{3}{4}$ -inch top couplings for lead pipe; the side and bottom so that 1 or $1\frac{1}{4}$ inch lead pipe can be used to water back; top spuds are tapped for 1-inch iron pipe, and the side and bottom spuds for $1\frac{1}{2}$ -inch iron pipe; 100-gallon boilers and larger have $\frac{3}{4}$ -inch iron pipe tube.

Special size boilers made to order.

For other sizes and prices of E-941, see Regular Boiler List.

E-942.

Prices given above are Boiler and Coil only; Couplings, Tube and Stand extra.

We manufacture Boilers, as shown in E-942 with Galvanized Iron Steam Coil inside to heat the water by steam, especially for use in places where a large quantity of hot water is required, and steam can be had for heating purposes, or in hotels, public institutions, hospitals, asylums, etc. Accompanying illustration shows the Coil inside of Boiler, the inlet and outlet for the steam, also the regular 1-inch pipe openings for the connection to water back; these openings are always provided so that they can be used to make connection with the water back in range if desired, or plugged if steam only is used. E-942 is intended to be set up vertically, on regular boiler stands, as shown on page 274.

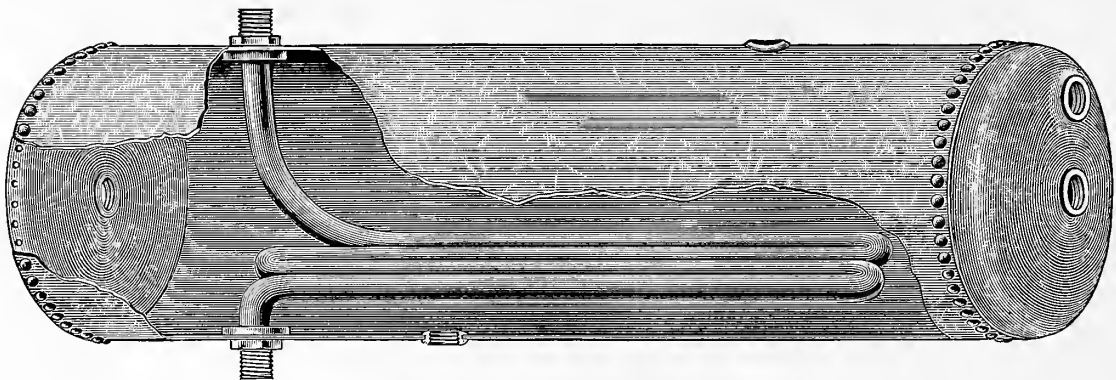

See next page for Boilers with Horizontal Coil inside.

The pressure of steam, size of Boiler and quantity of hot water required determines the number of feet of heating Coil needed; therefore the cost varies so much that no price can be appended.

NOTE.—When ordering, always state the *number of pounds of steam pressure* to be used on the copper coil.

The above Boilers, E-943 and E-944, are made with Horizontal Galvanized Iron Coils so Boilers can be suspended (horizontally) from Ceilings by Hangers (see E-938), or set upon Wall Brackets (see E-939). The Steam Inlet can be either at the top or bottom, as shown. Boilers will always be sent with the regular 1-inch openings for water back.

FOR PLUMBING, SEWERAGE AND GREEN HOUSE USE.

To those interested and wanting an excellent quality of Cast Iron Pipe for Plumbing, Sewerage and Green House use, we wish to state that—
The superior quality of our Cast Iron Pipe is too well known to require comment; its excellence is admitted by the trade, to whom we refer for endorsement of our claim that its reputation was made on merit alone.
Weight, Full Size of Pipe, Depth and Strength of Hub are particulars in which we claim superior merit.
For the production of “Extra Heavy Pipe,” we are as well equipped with modern patterns and machinery as on our regular Pipe, making all sizes from two to twelve inches, inclusive.
Our Pipe is coated with Tar, the deleterious acids in it having first been neutralized.
Our “Extra Heavy” Pipe has cast on it “Wolff’s Ex. H’y” in raised letters.

SELF-CLOSING HYDRANT.

E-630.

New Improved Compression and Self-closing Anti-freezing; with Sediment Chamber Attachment and Ground Union Joint, fitted for Iron or Lead Pipe.

Thousands of these Hydrants have been in use throughout the United States for the past fourteen years, and have given entire satisfaction.

Recent valuable improvements render this the most complete and durable Hydrant ever invented.

Requires no digging up for repairs. By unscrewing the Nozzle and Top and lifting the Tube from the Stock, on the end of which is the Valve, a new Washer can be put on, which requires little or no mechanical skill. This, however, is not likely to occur in several years.
